

Further confirmation is now coming out saying that **Grand Theft Auto IV** will indeed be coming out for PC. Take a look:

A recent ESRB ratings update lists both Grand Theft Auto IV and Bully: Scholarship Edition for the "Windows PC" platform, which constitutes the first solid confirmation the two titles are heading to the PC. Grand Theft Auto IV has long been assumed to make the jump from consoles, as most major releases of the franchise, from the first Grand Theft Auto through Grand Theft Auto: San Andreas, have eventually shown up on the platform. The Xbox 360 and PlayStation 3 versions of Grand Theft Auto IV were released this past April.

Bully, a third-person perspective action game set in a schoolyard, was originally released on Sony's PlayStation 2 back in October of 2006. The enhanced Scholarship Edition for the Xbox 360 and Nintendo Wii shipped in March 2008.

At this time we're still awaiting an official comment from Rockstar Games regarding the ratings update.

Update: Since this story was published, the ESRB removed the GTA IV listing for PC from its public online database. However, the ESRB has not sent out a retraction letter to subscribers of the ESRB update service. Thanks to [IGN](#) for this news!
